

TABLES

TABLE 1: DATA QUALITY OBJECTIVES FOR CULLINAN RANCH SAMPLING

STEP 1: State the Problem

- Potential release of metals and pesticides occurred as a result of agricultural practices
 - The preacquisition survey reported elevated levels of barium, copper, nickel, and zinc in at least one of four areas at Cullinan Ranch and identified arsenic, mercury, and selenium as data gaps. The 1990 survey also detected elevated concentrations of DDT and DDD in the Farmyard area at Cullinan Ranch. Current restoration plans do not include placing clean dredge materials on the surface of the site.
 - Surface concentrations may be at levels that pose ecological risk.
-

STEP 2: Identify the Decisions

- Are concentrations of metals in sediment at the site above ecological or ambient criteria?
 - Are concentrations of pesticides in sediment at the Farmyard area above ecological or ambient criteria?
-

STEP 3: Identify Inputs to the Decisions

- Grab sediment samples analyzed for total metals and pesticides.
 - Ecological and ambient criteria
 - Professional judgment regarding detection frequency and co-occurrence, magnitude of concentrations, spatial distribution and toxicological effects.
-

STEP 4: Define Study Boundaries

The spatial boundaries for proposed investigation areas:

- Cullinan Ranch Site: 0 to 0.25 feet bgs and > 0.5 feet bgs
- Farmyard: 0 to 0.25 feet bgs and > 0.5 feet bgs
- Pole Barn: 0 to 0.25 feet bgs and > 0.5 feet bgs
- East Pond: 0 to 0.25 feet bgs and > 0.5 feet bgs
- West Pond: 0 to 0.25 feet bgs and > 0.5 feet bgs

The temporal boundary of the investigation is latter part of 2003 dry season.

STEP 5: Develop Decision Rules

Depending on the detected concentrations and reference values for each chemical, elevated chemical concentrations in sediment in an area will be based on:

- If concentrations of metals and pesticides were detected, then a potential release has occurred.
 - If concentrations of a chemical exceed ecological or ambient criteria, then the site may pose unacceptable risk to the environment.
 - If frequency of detections is greater than 10 percent, then the site may pose unacceptable risk to the environment.
 - If detected chemical concentrations co-occur, then the site may pose unacceptable risk to the environment.
 - If detected concentrations occur throughout the site, then the site may pose unacceptable risk to the environment.
 - If the toxicological effects of detected concentrations are severe, then the site may pose unacceptable risk to the environment.
-

STEP 6: Specify Tolerable Limits on Decision Errors

- Because a statistical evaluation is not defendable based on the number of samples taken, it is not possible to specify quantitative limits for Type I and Type II decision errors.
 - Limits on decision error are affected by analytical errors. Errors inherent in sampling and analytical methods assessed using established quality assurance/quality control goals.
 - Project-required reporting limits are specified in Table 3.
-

TABLE 1: DATA QUALITY OBJECTIVES FOR CULLINAN RANCH SAMPLING

STEP 7: Optimize the Sampling Design

- The sampling locations will be identified based on results from the previous report and best professional judgment. Sample locations will attempt to maximize the spatial extent
 - Surface samples will be collected from 18 locations at two depths per location (0 to 3 inches and greater than 6 inches below sediment surface).
 - Sediment samples will be analyzed for total metals and pesticides. Based on the previous survey results, pesticides will only be analyzed in samples collected from the Farmyard Area.
-

Notes:

bgs	Below ground surface
DDD	Dichlorodiphenyl dichloroethane
DDT	Dichlorodiphenyl trichloroethane

TABLE 2: SAMPLE AREAS, SITE DESCRIPTIONS, AND ANALYTICAL METHODS

Sample Areas	Description	Analysis	Analytical Method
Pole Barn	There is one large metal structure at the site, formerly used as a barn. Only the roof and side poles remain on the structure. Metal debris and mulch piles are visible throughout the site. The vegetation around the site is dominated by fennel. The soil is compacted with interbedded rocks and gravel.	Metals (except mercury) Mercury Pesticides	EPA 6010B EPA 7470
Farmyard	The walls of one structure and the foundations of two additional structures remain at the site. The buildings were possibly used as a residence and storage areas for equipment. There is a gravel driveway leading to the buildings. Rusted metal debris, including an empty drum and various metal pieces, are scattered around the site. The pump canal is adjacent to the farmyard and contains standing water with a red, rusty, metallic sheen. There are large amounts of dead wood dispersed along the shoreline of the canal. The primary vegetation around the farmyard site includes coyote bush, fennel, and grasses.	Metals (except mercury) Mercury Pesticides	EPA 6010B EPA 7470 EPA 8081A
East Pond	There are no structures at the east pond site. There is also no standing water. Various types of debris are scattered throughout the site, including an empty rusted drum, rusted metal debris, shotgun shells, clay pigeons, wood pilings, and a clay pot. The vegetation consists of salt grass, and salt crystals are visible on the soil and grass around the site. The soil is discolored in some areas.	Metals (except mercury) Mercury	EPA 6010B EPA 7470
West Pond	There are no structures at the west pond site. There is also no standing water. The area is relatively flat with noticeable salt crystal formations around the edges of the pond. The vegetation includes coyote bush, grasses, willows, and reeds.	Metals (except mercury) Mercury	EPA 6010B EPA 7470

Notes:

Below ground surface

BHC Benzene hexachloride/alpha hexachlorocyclohexane

Calibration was out of the method quality control limits.

DDT Dibenzodiphenyl dichloroethane

DEDE Dibenzodiphenyl dichloroethene

DDE Dibenzodiphenyl dichloroethane

Effects range-low

Effects range median

Detected concentration is less than the reporting limit; therefore, the results are considered estimated.

Estimated concentration

Other qualifications, such as two column confirmation variance and system performance; therefore, the results are considered estimated.

Millsigrams per kilogram

Not applicable

Reporting limit

San Francisco

Not detected

Upper confidence limit
